

My Review

The beginning of a series that is shaping up to be such a great and unique one. The Babel Apocalypse is set in the near future. It is a time when humans no longer learn language. Instead, it's streamed to their brains. When there is an outage, the whole world is thrown into chaos, as many of the population in the Tier One world don't have the skills to speak without the streamed language.

A very cleverly written book that blends sc-fi, mystery, and thriller together successfully. The character of Ebba Black is fabulous! The last native speaker of the dead languages in the automated world and a linguist professor. Helps Emyr Morgan in the race to discover who is behind the outage.

I was addicted from the first paragraph and didn't stop reading until the last page. I couldn't pull myself away from this book. The twists were perfectly placed, and there was enough action to fill two books, never mind one! It also left me thinking about language and important it is to the human race.

I know I'm now looking forward to the next book so much!
