

beckerbingesbooks I don't read a lot of science fiction, but this book had me HOOKED from the beginning. Just imagine being born and automatically having an implant put into your brain that controls language. You literally can speak any language you want right off from the start. The kicker? You have to pay for a "subscription". More languages, different accents? More money you have to pay! But what happens if there's a cyberattack and those subscriptions don't work anymore?! You're considered a feral and have no way of communicating. INSANE! This book was just crazy! I'm so mad I have to wait til next May for the second book because the ending?! 🤖 @rrbooktours @nephilim_publishing
